Company portrait:	FINESS Software UG develops and distributes Mac and iOS software for the media market in cooperation with software companies and developers.
Title:	nessMediaCenter: FrontRow alternative for Mac OS X
Teaser:	nessMediaCenter is a suitable alternative for „Front Row“ which is not available anymore since (Mountain) Lion.
Text:	<p>Since Mac OS X 10.7 Apple offers „Front Row“ no longer as media center, many users are searching for an alternative. Although various media centers are available, no solution uses the system functions as similarly as „Front Row“.</p> <p>nessMediaCenter is the suitable alternative for „Front Row“ to access local media and internet content. By using existing system features such as QuickTime, the program is very small (6 MB) and requires low processing power. It is compatible with all Mac OS X systems from 10.4 "Tiger" to 10.9 "Mavericks". With the QuickTime extensions "Flip4Mac" and "Perian" all popular movie formats are playable.</p> <p>Local media can be accessed by folders and hard drives as well as application data from Aperture, iPhoto, iTunes and „Photos App“. Furthermore, the structure offered by the system – such as the picture and movie folders – is used directly instead of reorganizing the media in a new library.</p> <p>The internet offer supports various providers such as BBC iPlayer, DailyMotion, German and Swiss television, movie trailers, YouTube. In categories like movies, music videos and entertainment, more than 2500 internet videos of different providers are available.</p> <p>Using nessMediaCenter, pictures, movies and PDF documents can be presented both individually and sequentially. DVDs and EyeTV movies are supported as well.</p> <p>nessMediaCenter can be controlled by Apple Remote Control, "VR Remote" app for iPhone and iPod touch, trackpad, Magic mouse or keyboard. The demo version allows it to test the software for 30 minutes - thereafter nessMediaCenter must be restarted.</p> <p>More information at: http://www.nessmediacenter.com</p>

Mac App Store	The 64 bit version of nessMediaCenter, which is based on „AV Foundation“, is also available at the Mac App Store: https://itunes.apple.com/en/app/nessmediacenter/id913330315?l=en&ls=1&mt=12
